

Environmental Policy Statement

Eland Cables supply a wide range of cables and accessories to a broad range of different markets across the World.

The Directors recognise that the activities of the company have an impact on the environment and consider that the protection of the environment is an essential business responsibility.

Eland Cables will comply with all relevant legal requirements and industry guidance ensuring that all personnel are aware of their obligations.

We are committed to minimising pollution and making sure that our business has a minimal impact on the environment. Eland Cables plans on achieving this through a program of continual improvement in the way in which we use natural resources in our operations. We will take every opportunity to reduce energy and materials consumption and where possible to reuse and recycle our materials.

To facilitate this we are committed to the implementation of a management system which meets the requirements set out by the international standard BS EN ISO 14001:2004. This will be reviewed regularly in conjunction with our quality management system BS EN ISO 9001:2000. It will include the setting out of objectives and measurable targets which will be recorded and analysed to ensure they are being achieved.

This policy is supported by our Directors and Senior Management Team who will ensure that it is fully implemented and that all staff are aware of the policy through training and awareness programmes.

The policy is available to all interested parties and is published internally on notice boards and externally on our web site.

P Brown
Managing Director
