

Environmental Policy Statement

At Eland we believe that cables should not have to cost the earth; and with a comprehensive range of cables and accessories supplying the world market the company clearly understands its responsibilities to the environment.

We are committed to reducing the company's Carbon footprint and have implemented a continuous improvement programme to encompass all aspects of our carbon usage and waste.

Like most environmentally aware companies, the Directors understand that reducing the Carbon Footprint can also have added cost benefits in areas such as energy and waste material reduction programmes.

Key Performance Indicators (KPI's) are set by the board on areas such as Energy Usage, Waste Recycling and Packaging in order to reduce the effective Carbon footprint of the company.

Eland Cables is working in conjunction with suppliers to reduce packaging materials and maximise container utilisation in a further effort to reducing carbon usage.

The company seeks to achieve its Environmental objectives through the management system which is designed to meet the requirements of BS EN ISO 14001:2004. This is reviewed and managed in line with our Quality Management system.

The Environmental system is independently certified by Bureau Veritas. A copy of the certificate is available for download within the Quality section of our website.
